NATURAL
PRODUCTS

ULCEROVET

*Product containing a standardized powder from the herb of *Maytenus ilicifolia*, which is beneficial in the treatment of stomach ulcers in horses. Protects the stomach lining from damage by reducing gastric acid secretion and stimulating prostaglandin production. Maytenus also has an anti-inflammatory and analgesic effect.*

EFFECTS

- » Reduces pain symptoms in horses with stomach ulcers.
- » Anti-inflammatory and analgesic effect – protects the stomach lining by reducing hydrochloric acid production and stimulating the production of prostaglandin (production of protective mucus).
- » Reduces the amount of bacteria involved in the inflammatory response, normalizing both the stomach and gut microbiome.

USE

- » Treatment of gastric ulcers in horses (reduces gastric acid secretion and stimulates prostaglandin production)

- 
- » When administering painkillers or antibiotics.
 - » Preventive administration in the case of stress.
 - » In cases of the insufficient efficacy of proton pump inhibitors.

INGREDIENTS

100% standardized Maytenus ilicifolia powder

RECOMMENDED DOSAGE

Daily dose for horses: 3–6 g Pour hot water over the powder and mix. Administer after cooling. After three weeks of use, take a 1-week break.

RECOMMENDATIONS

We recommend consuming the

product within three months of opening.

WARNING

Consult a veterinarian in the case of acute stomach ulcers. **This product is not a substitute for veterinary care or medications recommended by a veterinarian.**

Do not exceed the recommended daily dose! Not suitable for pregnant females. Keep out of the reach of children!

ADVERSE REACTIONS AND INTERACTIONS

Unlike with proton pump inhibitors, there are no side effects due to permanent changes in gastric juice pH.

STORAGE

Store in a dry place, out of direct sunlight, at a temperature of 10–25°C, protect from frost. The best before date is marked on the packaging.

WEIGHT

150 g

Recommendations of breeders

Ulcerovet has helped many horses escape the vicious cycle of recurrent gastric ulcer treatment with proton pump inhibitors (medicines that reduce gastric acid secretion). It has also helped successfully treat stomach problems directly without using these traditional drugs. In most cases, the first improvement in symptoms occurs within 2 weeks of administration. Unlike treatment with proton pump inhibitors, these effects persist. Ulcerovet is a very effective alternative to treating gastric ulcers in horses that does not cause secondary problems such as dysbiosis or inflammatory bowel disease.
